

Connected technologies bring luxurious features to the bathroom

“Mirror, mirror on the wall, please connect me to the conference call.”

The humble bathroom mirror is getting a serious upgrade with Strasser Woodenworks' new Hi-tech Bluetooth Mirrors. For the homeowner, this means greater functionality, versatility, and, yes, a bit of entertainment from what was once simply a piece of reflective glass.

Touch-control icons located on the bottom of the mirror operate four independent functionalities:

Integrated backlighting: LEDs emit a glow from behind, ideal for creating a soft, ambient light for relaxing baths or late-night bathroom visits.

Built-in makeup lighting: Integrated LEDs along the mirror's "frame" are switchable between a warm/soft-light setting (2700k) or a cool/bright-light setting (4000k) depending on the task.

Defogging: Using a delicate heat, the defogging mirror keeps the glass free of steam during and after showers. It includes automatic shutoff.

Bluetooth and speakers: Homeowners can connect smartphones or tablets to the mirror via Bluetooth to listen to music, the news, or podcasts.
