VANITIES

Lighting Information Guide

INSTALLATION RESOURCES

Under Cabinet Lighting

STRASSER

IMPORTANT

A switched outlet is required.

The lighting cord includes a built-in dimmer switch, but once the vanity is installed that switch may be inaccessible inside the cabinet. The lighting kit must plug into an outlet controlled by a wall switch.

ELECTRICAL REQUIREMENTS

Your electrician needs to install a switched outlet before walls are finished. The outlet should be positioned behind your vanity drawers (or right side for all-drawer models). We can customize this placement if needed.

LED LIGHTING SETUP

The warm white LED system uses a USB-A transformer (5V/2A) that plugs into your switched outlet. A 12-inch USB cord inside the cabinet gives you flexibility for outlet placement.

INSTALLATION STEPS

01 Locate the outlet within the cabinet's back opening

02 Install and secure the vanity to the wall

03 Plug the lighting cord into the outlet

04 Test the wall switch

Use the wall switch to turn lights on and off.

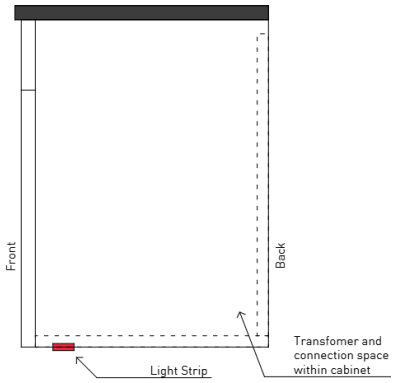
TECHNICAL SPECS

1200 lumens

4000K warm white (cool white available on request)

Built-in dimmer on the cord

VANITIES



NOTE The lighting will be attached to the base panel of the vanity.
